Academic Projects

Fuller-Based English Reading Mobile Application
- Developed a mobile application designed to assess English reading proficiency for Grades 1 - 3 students.
- Worked both as project lead and developer and applied UI/UX principles and backend data handling.
- Integrated a pre-trained Speech Recognition model to transcribe spoken words and provide real-time automated miscue feedback.

Oceanify: Weather Application for Seafarers
- Developed a weather application tailored for seafarers using interactive maps and real-time marine weather data.
- Served as project lead and developer, coordinating tasks for efficient development.
- Integrated third-party weather APIs and contributed primarily to backend development.

System Integration of EZ Fitness Gym Management System
- Contributed to frontend development and functional requirement analysis for a gym management system.
- Provide ideas for based on the functional requirements
- Supported more on the frontend development and less on backend.

Dental Clinic Management System
- Developed a desktop application supporting patient records, bookings, and clinic monitoring.
- Worked across frontend, backend, and database design.

Technical Skills
