

Summary

Detail-oriented IT graduate with hands-on internship experience in full-stack development. Proficient in React, Java, and SQL, with a focus on building secure and efficient applications. Eager to contribute technical skills to a development team.

Education

Central Mindanao University

Maramag, Bukidnon

Bachelor of Science in Information Technology - University Honor (2026), Special Academic Distinction (2026) 2026

Capstone Project: *Development of a Mobile Application for Fuller-Based English Reading with Speech Recognition and Feedback*

Experience

Department of Education Region X

Cagayan De Oro City

Intern Programmer

Feb 23 – May 11, 2026

- Optimized the Learner Tracking System by implementing bulk data imports and adding data visualization charts.
- Implemented data encryption to secure sensitive student and guardian information.
- Developed an employee exit module for the Human Resource Information System.
- Assisted with technical support and collaborated within an agile team workflow.

Academic Projects

Fuller-Based English Reading Mobile Application

- Project Lead & Developer. Created both frontend and backend data handling for Grades 1-3 elementary students and teachers.
- Integrated a Speech Recognition model for real-time automated feedback using Deepgram.
- Deployed in Google Play named Fuller Reading Assessment.

Oceanify: Weather Application for Seafarers

- Project Lead & Developer. Coordinated development tasks and built a weather dashboard using real-time marine APIs.
- Managed frontend development and API integration.

System Integration of EZ Fitness Gym Management System

- Assisted with frontend development and requirement analysis for a gym management platform.
- Developed UI components for member booking and monitoring.

Dental Clinic Management System

- Built a desktop app for patient records and clinic monitoring using VisualBasic.net.
- Designed both the frontend, database, and managed backend logic.

Tuklas: An AI-powered Itinerary Assistant

- Created an AI travel planner that generates routes based on user input. (Deployed)
- Implemented Gemini 2.5 Flash and a RAG framework to generate accurate and personalized itineraries.
- Deployed using Vercel for frontend and Render for backend.

Technical Skills

Programming Languages: Python, Java, PHP, VisualBasic.NET

Frontend: HTML, CSS, Tailwind, JavaScript, React Native, Dart, Typescript

Backend and Databases: MySQL, PostgreSQL, Firebase, Supabase

Tools and Frameworks: Android Studio, Visual Studio Code, Visual Studio 2022, Laravel, Flutter, React, and React-Native

Version Controller: Git & GitHub
